

# Complete digital imagery and geometric data for manholes. Revolutionary data delivery at an economical cost.

After we have completed your manhole inspections you will receive a computer file and reports which allow you to;

- View any angle at any depth of the manhole from your desktop!
- Review complete 100% digital imagery of the inside of the structure!
- Manipulate geometric data and models which can be measured or exported to CAD!
- View an unfolded view of the structure in 2-D allowing precise measurements!
- Print reports or share data seamlessly!
- Integrate into your existing GIS and/or asset management system!

“Manhole investigations and studies are a first step toward comprehensive collection system improvements, and are often required to meet consent decrees from regulatory agencies. By thinking ahead, these projects can be used to develop a data platform for geographic information systems (GIS), and provide the infrastructure and condition data necessary to start an asset management system to organize maintenance needs and planning.”
